Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Yuan et al (US 5,984,007).

The slip element is met by slip element 18 shown in Figs. 2 and 3, where at least two cylindrical inserts 19 are provided in corresponding openings, and having end portion projected formed the body member 25 for gripping or biting in the casing wall (col. 2, lines 46+, and Fig. 1). The one of the inserts is fabricated from material that is strong than the material of the another insert is met anticipated by col. 3, lines 33-41, where one slip button or insert is made of a metallic-ceramic composite material which is materially stronger than the one made of non-metallic material. The inserts is anticipated to be drilled out when the slip is to be removed from the casing (col. 3, lines 16-21). The curved inner surface of the body conformed to the curvature of the mandrel is anticipated by Figs 1, 4, and 5, where curved inner surface of the body is clearly shown. The tapered end portion at the lower end of the slip element and the at least one groove in its outer surface are clearly anticipated by Figs 1-3. The claimed composite matrix body member is met by claim 3, where it is taught that the slip means is made of non-metallic composite material and the epoxy resin polymers and glass

fiber reinforcement is known to one of the ordinary skill in the art and therefore is also anticipated.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Streich et al, Ecer, Swor et al, and Sukup et al all teach slip elements and methods of using the same.
